## PORTFOLIO

- Murrelektronik's solutions feature tailored power supply and monitoring systems for entire plants as well as for connecting actuators and sensors with a proprietary or any other control system – all the way up to the cloud.
- With its technologies for network installations, I/O systems for all fieldbus and IoT protocols, safety technology, and efficient power supply solutions, Murrelektronik assists its customers with their digital transformation and the realization of new business models in the age of Industry 4.0.
- Murrelektronik focuses on decentralization to relocate assemblies from the control cabinet to directly in the vicinity of the process. This conserves resources and saves a great deal of time needed for installation and activation. The modular automation system Vario-X encapsulates this approach.
- Decentralized modules can be paired with preassembled connectors – this is significantly quicker and results in flawless, secure, and reliable connections. The use of smart decentralized modules makes simplified service and maintenance processes possible. This reduces downtimes and leads to maximum productivity and high quality.
- Murrelektronik is a market leader in connection technology and offers a wide array of cable lengths, cable types, and jacket colors.
- Customers benefit from application advice, services such as customer-specific developments or packaging optimization, and technical and commercial customer service.

## WHAT WE ASPIRE TO

### Murrelektronik products

- ... boost competitiveness
- ... save time on installation and activation
- ... conserve resources
- ... improve profitability
